23.6.3.8 CNT (Count)

Syntax

```
CNT {
  [brk={OFF | ON}]
  [next={label | 9-bit unsigned integer}]
  [reqnum={3-bit unsigned integer}]
  [request={NOREQ | GENREQ | QUIET}]
  [angle_count={OFF | ON}]
  [reg={A | B | T | NONE}]
  [comp = {EQ | GE}]
  [irq={OFF | ON}]
  [control={OFF | ON}]
  max={25-bit unsigned integer}
  data={25-bit unsigned integer}
}
```

Figure 23-134. CNT Program Field (P31:P0)

Figure 23-135. CNT Control Field (C31:C0)

Figure 23-136. CNT Data Field (D31:D0)

Cycles	One or two One cycle (time mode), two cycles (angle mode)
Register modified	Selected register (A, B or T)
Description	<p>This instruction defines a virtual timer. The counter value stored in the data field [D31:7] is incremented unconditionally on each execution of the instruction when in time mode (angle count bit [P8] = 0). When the count reaches the maximum count specified in the control field, the counter is reset. It takes one cycle in this mode.</p> <p>In angle mode (angle count bit [P8] = 1), CNT needs data from the software angle generator (SWAG). When in angle count mode the angle increment value will be 0 or 1. It takes two cycles in this mode.</p>

0 24 Max count
Max count가

angle_count	Specifies when the counter is incremented. A value of ON causes the counter value to be incremented only if the new angle flag is set (NAF_global = 1). A value of OFF increments the counter each time the CNT instruction is executed. Default value for this field is OFF.
comp	When set to EQ the counter is reset, when it is equal to the maximum count. When set to GE the counter is reset, when it is greater or equal to the maximum count. Default: GE.
irq	ON generates an interrupt when the counter overflows to zero. The interrupt is not generated until the data field is reset to zero. If irq is set to OFF, no interrupt is generated. Default: OFF.
max	Specifies the 25-bit integer value that defines the maximum count value allowed in the data field. When the count in the data field is equal to max, the data field is reset to 0 and the Z system flag is set to 1.
data	Specifies the 25-bit integer value serving as a counter. Default: 0.
